

WHEEL CHOCKS :: WCR-9Y

Wheel chocks are necessary for any construction, industrial or military setting. TCT's wheel chocks are environmentally friendly and made from recycled tire rubber. They can be used for a variety of vehicles, including delivery service fleets, campers, boat trailers, small aircrafts, recreational vehicles and even military ground equipment. They are designed so that the downward pressure from the wheels helps to lock the chock in place, ensuring that the vehicle will stay in place. TCT's wheel chocks are able to withstand extreme temperatures without cracking or drying out, and are impervious to road salt.

FEATURES

- Made from recycled tire rubber
- Able to withstand extreme temperatures without cracking or drying out
- Designed for downward pressure to help lock wheel chock into place
- Eye hooks on each chock can be used to rope two units together, move units with ease, or hang units when not in use
- Safety yellow color easily spotted in dimly lit areas
