

## DOUBLE DELINEATOR :: DD-44

Delineators are designed to move traffic into a specific lane or to prevent vehicles from entering a certain area. The delineators are ideal for use in construction areas or any place where traffic needs to be directed. The delineators are made of flexible, molded rubber, so if a vehicle were to hit it, there would be minimal damage done. The delineators are available in a variety of colors and feature reflective safety stripes, so that drivers are aware of them during the night or in poor driving conditions. Using molded rubber for the delineators means they will withstand the elements without breaking down or cracking.
