Quick Fence System

QFSS-30

Quick Fence Safety Systems are the solution for any fencing needs. Designed for use in construction site containment, emergencies or safety situations, the Quick Fence systems can be easily set up by one person. The fence posts are not drilled into the ground, rather they are supported by bases. This means that the fences can be set up quickly, moved around or reused at any point. The fences are ideal for indoor or outdoor use, and the bases are made of molded recycled rubber. By using recycled rubber, the bases are able to withstand extreme temperatures without cracking or breaking down. Quick Fence Safety Systems are the best solution for your needs.

Specifications

Fencing system includes five 30lb bases, five posts, 20 fasteners and 50' safety fence (4' tall)
